Mews Data Integration – Reconciliation Summary

Contracts vs. Seguimiento vs. HouseMonk · status as of 16 October 2026

1. Purpose

Before importing reservations into Mews, every reservation (identified by its NC code, e.g. **NC_1858**) is compared across three sources: the contract extraction (*Final_Format_Customers_Contracts_Extraction_15_10_2026*), the Seguimiento tracking sheet (*Final_Format_Seguimiento_15_10_2026*) and the HouseMonk billing system (*Final_Format_HouseMonk_15_10_2026*). Reservations where everything agrees are ready for import; the rest are listed in review tables by type of disagreement.

2. How the comparison works

A single build script (*contract-extraction/tmp-build-final-format-three-way-match.mjs*, run via *upload-matching-across-final-format-15-10-2026.mjs*) loads all three sources, links rows by NC number, compares each field and rewrites every result table in Supabase. HouseMonk rows already flagged in *Missing_Group_Code_HouseMonk_15_10_2026* (15) are left out. Current rules:

- **Names** – Contract vs. HouseMonk takes priority; tolerant of accents, spelling variants (e.g. Luis/Lluis), extra given names and multi-guest HouseMonk strings.
- **Unit types** – labels are normalised to common categories (Standard, Standard + Terrace, Comfort, Rooftop, Two Bedroom 2+1 / 2+2, etc.), ignoring PMR tags and typos.
- **Dates** – arrival and departure must agree across every source present.
- **Extras** (meal plan / parking) – treated as matching when contract and HouseMonk both exist, because HouseMonk exports do not carry these flags.
- **Rent** and **deposit** (new) – when contract and HouseMonk both exist, only that pair is compared, with a **±€10** tolerance; Seguimiento differences are ignored.

3. Data corrections applied

- **Missing contract rows (26 NCs).** Mismatch rows had no contract linked. 14 existed in *Customers_Contracts_Extraction_12_10_2026* but were not copied (NC_932 vs NC_0932 formatting) and were added. 12 had no contract at all (likely B2B2C / no PDF) and were created from Seguimiento + HouseMonk data, marked *Source: Seguimiento+HouseMonk backfill*.
- **Deposit extraction errors (4 NCs).** NC_1858 (1 → 1005), NC_1777 (1.02 → 1020), NC_1273 (1950 → 995), NC_1290 (1970 → 985) were set to the Seguimiento/HouseMonk value.
- **Fundación Mamá Cumbé (68 rows, NC_1963–2030).** The company agreement states 1441 €/month including 10% VAT; HouseMonk invoices 1310 €/month. Contract rent was set to 1310.
- **Other company contracts (24 fixes).** Where the contract is company-linked (partner company, match in *Companies_Extraction_12_10_2026*, or a company name as guest) and Seguimiento and HouseMonk agree, the contract rent/deposit was aligned to HouseMonk (e.g. CHAMARI ITG, JJ Activos España). A follow-up audit found **no remaining** rent or deposit mismatches caused by company agreements.

4. Tables in Supabase

Table	Content	Rows
Final_Format_Three_Way_Match_15_10_2026	One row per NC found in at least 2 sources, with every value side by side and a match flag per field (incl. new rent_match / deposits_match)	674
Final_Format_All_Fields_Match_Mews_Import_15_10_2026	**New.** Reservations where every field matches, with the exact 79 column headers of Mews_import_v2.10.0.xlsx (Customers sheet)	389
Final_Format_Mismatch_Names_15_10_2026	Name disagreements	23
Final_Format_Mismatch_Unit_Types_15_10_2026	Unit type disagreements	18
Final_Format_Mismatch_Dates_15_10_2026	Arrival / departure disagreements	107
Final_Format_Mismatch_Rent_15_10_2026	**New.** Monthly rent differs by more than €10	148
Final_Format_Mismatch_Deposits_15_10_2026	**New.** Deposit differs by more than €10	25
Final_Format_Mismatch_Extras_15_10_2026	Meal plan / parking disagreements	0

Mismatch table layout: *nc_code*, *nc_number*, **guest_name**, **guest_document_number**, the compared values from each source, the source row ids (*customers_final_id*, *seguimiento_final_id*, *housemonk_final_id*) and finally an empty **Acutal Value** column for manual entry of the correct value.

5. Progress

Stage	Rent mismatches	Deposit mismatches	Fully matching reservations
Rent / deposit added (exact amounts)	508	70	120
Seguimiento rescale fix (e.g. 1.32 = 1320)	429	70	178
Contract vs HouseMonk only, ±€10 tolerance	234	32	306
4 deposit fixes	234	28	310
Mamá Cumbé 1441 → 1310	169	28	375
Company-linked contracts aligned	**148**	**25**	**389**

6. What remains to review

- **Rent (148):** 80 where Seguimiento and HouseMonk also disagree with each other (operational data issue); 68 individual contracts where the extracted rent differs from billing even though Seguimiento and HouseMonk agree – these need a case-by-case check against the PDF.
- **Deposits (25):** 16 where Seguimiento and HouseMonk disagree; 9 individual contracts.
- **Dates (107):** the rule is still strict across all sources; many are likely extensions or early departures that are recorded in one system only.
- **Names (23) and units (18):** small residual sets for manual review (e.g. NC_1943 Standard + Terrace in the contract vs Comfort in HouseMonk).
- **12 backfilled reservations** without a contract should be confirmed as B2B2C or similar.

7. How to refresh

After any data change run *cd contract-extraction* then *node upload-matching-across-final-format-15-10-2026.mjs*. It rebuilds and overwrites all tables above (anything typed into **Acutal Value** will be cleared, so export reviewed values first). SQL for new columns/tables is in *contract-analysis* and documented in *RUN-IN-SUPABASE-SQL-EDITOR.md*. Note: the column-reorder SQL drops and recreates the mismatch tables, so the upload must be run again afterwards.
